

**- What you learn from doing this assignment?**

Through doing these 4 problems, which are a bit harder than previous ones, I have practiced and consolidated my understanding of the combination of using if/else conditions, returns, for loops and parameters to solve problems. At the same time, I also tried to simplify my code since the problems are getting harder.

**- What still confuses you?**

No.

**- What questions you have?**

Can I just simply return nothing to quit the program? I find it also works. And is there an easier way to solve Problem3?
