- **What you learn from doing this assignment?**
  Through doing these 10 problems (a lot for me haha), I have practiced and concreted my understanding of for loops and parameters, knowing the use of Python much better before. I still need more practice in order to improve my coding efficiency. I am really excited and looking forward to learning more about Python and, perhaps, other coding languages.

- **What still confuses you?**
  No.

- **What questions you have?**
  I am curious about what will happen if I call a function within itself. Is it an example of recursion? For example, when I did the problem of Fibonacci, I tried to use terms like Fibonacci(i-1) and Fibonacci(i-2) within the function of Fibonacci. But I failed and tried another way.
